

500

The 500 Series Fan Controller gives users the capabilities needed to get most out of their fans. Offering advanced control for up to 30 fans over an Ethernet based network that includes power for the controller. Easily manage each fan's operations from the 5" PCAP touchscreen with a clean graphical visualization of speed and direction. The controller allows users to schedule and create zones of fans for simple control, as well as displays fault information making any troubleshooting a breeze.

- **Simple intuitive user Interface to control up to 30 fans**
- **Password protection for scheduling, grouping, and fannaming**
- **BMS Integration with optional gateway**
- **Fan diagnostics directly from screen**
- **Quick install, no additional power necessary**
